

## **INSTALLATIONS IN THE BLINK OF AN EYE WITH VISU CONTROL**

Comap Westco - the leading manufacturer of heating and plumbing products and the pioneer of crimping systems in the UK - has introduced the first ever visual indicator that makes copper crimping even speedier and more reliable: Visu Control.

A unique, patented technology, Visu Control offers installers quick, easy and unfailing proof that a secure crimp joint has been completed. If a fitting had been overlooked and left uncrimped, this cutting-edge system allows installers to rectify the situation at the time of installation, rather than when the system is being filled or pressure tested.

Deceptively simple, Visu Control consists of a coloured ring at either end of the copper crimp fitting. The installer simply joins the fittings as usual with a crimping tool, whose pressure alters the shape of the plastic ring, and allows the ring to be removed by hand. A fitting with no plastic ring is proof of a secure connection.

Chris Ramster, Product Strategy Director at Comap, commented; "Visu Control is the perfect example of Comap's commitment to continually improve the functionality of our products. We're dedicated to making life easier for installers, and the success of Visu Control is hugely gratifying, as it shows our innovations are welcomed."

Available on all Comap's Sudopress range of copper crimp fittings, Visu Control is colour coded for ease of reference. A green ring denotes WRAS approved water fittings whilst a yellow ring is used for Gastec certified gas fittings. Manufactured in Comap's state-of-the-art European factories, Visu Control fittings feature Sudopress' trademark double crimp, ensuring industry-leading security and reliability. Available in a range of sizes and diameters the fittings are compatible with all profile V tools.
