

## **THE WESTHERM 5 FROM COMAP WESTCO – THE WISE TRV CHOICE**

Comap Westco has introduced the Westherm 5 to its extensive range of heating products. The thermostatic radiator valve combines great looks with exceptional functionality, benefiting from all the precision of the traditional Westherm valves, combined with sleek, fresh visual appeal.

Its neat, compact head is designed for ease of use, with clearly visible settings, control graduations and an ergonomic shape. The simple look blends perfectly into any room.

Manufactured in one of Comap's state-of-the-art European factories, the Westherm 5 meets the highest technical specifications: precision engineered, it features minimum settings and frost protection, as well as the ability to lock and limit the temperature range for excellent energy efficiency. Fully reversible, the Westherm 5 is available in angled, straight, and with a lockshield valve.

The TRV is fast and easy to assemble and is also available in a full range of time saving, hassle-free options. The Westherm 5 radiator pack includes a 10mm Sudofit pushfit bend. This is ideal where pipework is installed in the dry lining and pipes come through the wall to meet the radiator: the Sudofit bend makes it unnecessary to use additional fittings to complete the connection. Further, the Sudofit bend makes the installation fully demountable and all parts can be re-used – perfect for decorating.
