

ULTIMATE TERMINAL GUARD PROTECTION FROM COMAP

Comap – the leading European manufacturer and distributor of plumbing and heating products – has added a range of terminal guards to its 5,000 strong product range.

With BS5440 Part 1-2000 stating that a suitable guard should be provided whenever an appliance terminal is fitted less than 2 metres above the ground, or above a balcony or flat roof, the terminal guards are must-have additions to the product range.

British Gas approved, Comap terminal guards conform to precise standards, as no part of the guard would ever sit less than 50mm from any part of the terminal.

Comap's range of zinc plated terminal guards features both circular and rectangular models to suit different applications. Also available are plastic coated guards which are specifically suited to condensing boilers.

Product Strategy Director, Chris Ramster, commented: "Comap has a long tradition of providing products to help installers comply with the latest regulations. The terminal guards are a solid addition to our product range and have been added thanks to popular request."
