COMAP SHOWS REAL 'FLARE' WITH NEW RANGE OF FITTINGS

Comap – the leading European manufacturer and distributor of plumbing and heating products – has added to its extensive collection of fittings by introducing a range of flare fittings for copper oil lines.

Flare fittings are used for the connection of copper oil lines and are the recommended choice of OFTEC.

Comap's range, which includes couplings, tees, nuts and a flare tool kit, is available in both 8mm and 10mm. The range responds to a large niche market for oil fired central heating systems, particularly prevalent in areas of the country where mains gas isn't available.

Chris Ramster, Product Strategy Director for Comap, said: "With products to cover even the most niche market, Comap truly is the one stop shop for plumbing and heating professionals. We were propelled to develop a range of flare fittings when we kept fielding enquiries from merchants and installers – the need is there and so Comap has plugged a gap in the market."

The range of flare fittings features in Comap's new full colour product guide and the range of fittings will continue to grow to service the significant number of houses that run from oil fired central heating.
