

COMAP INTRODUCES ENERGY EFFICIENT SPIROTECH MAGNABOOSTER PRODUCTS

Comap - the leading manufacturer and distributor of plumbing and heating equipment – has introduced the unique, energy efficiency enhancing SpiroCombi and SpiroTrap ‘Magnabooster’ products, from Spirotech UK, into its product portfolio.

The SpiroTrap and SpiroCombi ‘Magnabooster’ products provide a simple yet efficient way to remove air and all types of debris and magnetite from central heating systems. They are of robust, brass construction and are low maintenance as they require cleaning just once a year.

The revolutionary SpiroTrap ‘Magnabooster’ incorporates a self cleansing magnet to offer continued dirt separation, removing all the dirt and magnetite from the system – thus preventing sludge build-up. It is available in both horizontal and vertical models, and is compatible for both new and existing installations.

With quick and easy installation, the SpiroTrap ‘Magnabooster’ does not require an external power supply to operate, so central heating systems can run at optimal efficiency.

The SpiroCombi ‘Magnabooster’ has all the advantages of the SpiroTrap ‘Magnabooster’, with the added bonus of also being able to remove air as well as dirt, from central heating systems - leaving the systems totally air free, as well as dirt and magnetite free. The SpiroCombi Magnabooster eliminates cavitations in the pumps, trapped air in radiators and puts a stop to cold spots. Boiler noise is drastically reduced and there is no more time-consuming bleeding and venting of radiators. Again, it is available in both horizontal and vertical formats.

Paul Flynn, National Sales Manager for Comap’s Projects division, commented: “After the initial commissioning on installation, these products will only require emptying once a year, on annual service. In view of their many customer and end user benefits, we’re anticipating considerable marketplace demand for these unique Spirotech innovations.”
