

## **COMAP PROVIDES ONE BOX SOLUTION WITH LAUNCH OF INSTALLATION FITTINGS PACKS**

Comap – the leading manufacturer and distributor of plumbing and heating equipment and stylish taps – has launched a new range of installation fitting packs, providing a hassle-free, one box solution for complete heating installation.

The new packs feature all the fittings and components needed for heating installation; covering everything from valves to inhibitors, desludgers and even filling loops and PTFE tape. With three choices of pack – Upto 7 Radiator, Upto 8 Radiator and Combi Boiler Upgrade kit - they are ideal for both trade merchants and contractors.

With one price per kit, and one corresponding code number, the packs present time-saving benefits to both merchants and installers. This innovative solution means that ordering and pricing fittings is no longer a time-consuming chore. Comap's new one box solution also allows for easy transport and on-site storage.

For larger contractors, bespoke installation fittings packs can also be provided to meet specific requirements.

Paul Flynn, National Sales Manager for Comap's Projects division, commented: "Comap prides itself on being able to provide the best in both products and service to merchants and installers alike. The development of the new packs is poised to provide a comprehensive, cost effective and high quality solution for all heating installation."
