

## COMAP DEVELOPS NEW RANGE OF ONE BOX SOLUTION FITTINGS PACKS

Following the success of the 'One Box' radiator installation packs, Comap – the leading manufacturer and distributor of plumbing and heating equipment – has developed a new range of fitting packs, providing a hassle-free, complete solution for expansion vessel installation.

The time-saving Expansion Vessel pack from Comap consists of an expansion vessel, a mounting bracket and a Comap expansion vessel control kit. Ready to install and available in eight different sizes, these kits are ideal options for both trade merchants and contractors.

Ordering and pricing fittings is no longer a time-consuming chore thanks to this innovative Comap solution. The EV Kits also allow for easy transport and on-site storage.

Compatible with both new central heating systems or ideal as a simple system upgrade, the Comap EV Kits help to overcome problems associated with cold water storage tanks located in loft spaces.

Comap's Sales Director, Ged Grimes, said: "The One-Box radiator installation packs have proved a great success with our customers and we are confident that the new Expansion Vessel packs will perform just as well. The development of these new packs will provide considerable time and cost benefits to our customers, and we hope to continue to expand our 'One Box' collection in the future with further innovative product options."
