

DAVE SCOOPS REMS TOOLS PRIZE IN COMAP'S HVP COMPETITION

Congratulations to Dave Newton from Liverpool who recently won an amazing £1,000 worth of REMS crimping tools in a recent Comap competition in Heating, Ventilation and Plumbing magazine.

Dave's prize featured the REMS Mini-Press ACC and three interchangeable jaws, ideal for use with the Comap Multilayer collection. This innovative system from Comap is now available with a full range of fittings and dimensions and includes a selection of larger size fittings, up to 63 mm – complete with protective caps to shield the fittings during transportation.

With pipes that are a combination of pex/aluminium/pex, the products in Comap's Multilayer collection are workable by hand – yet rigid enough to retain their shape. This means that bends can be formed in the pipe, reducing the number of fittings required – minimising both hassle and cost.

The REMS Mini-Press ACC is a universal, 'Super Handy' electric tool with automatic circuit control and, for extra convenience, it can also be battery operated. It is ideal for producing pipe pressing joints for all common press fitting systems. The REMS Mini-Press ACC is fully compatible with Comap's Multilayer range, providing secure crimping in seconds.

Peter Hall of REMS was pleased to present this fabulous competition prize to Mr Newton at his home in Liverpool as pictured.

A leading manufacturer of machines and tools for pipe working, REMS' products combine both state of the art technology and high standards of product quality and offer the perfect tools that are strong enough for all the tough demands. Headquartered in Germany, REMS' tools are used by plumbing and heating professionals throughout the world.
