Central heating components feature for Newsflow
Draft 1 – for approval

Warm up your customers this winter!

With the temperature rapidly dropping, we're sure your thoughts, like ours, are turning to central heating – and at Comap we're providing a comprehensive range of products to help warm up your customers as we enter the season of cold, dark nights.

You're probably well acquainted with our great collection of TRVs manufactured in our state-of-the-art European factories – including the stunning S2, and the ever popular Westerm 5, with their neat, ergonomic heads and precision engineering. You might have tried our handy TRV and manual valve twin packs too. With a well-established range of manual valves including the distinctive Cosmos and Nova - which is one of the most specified valves in the country - Comap has radiator valves covered!

But did you know that Comap can also supply you with everything from time-saving expansion vessel kits - which include an expansion vessel, a mounting bracket and a Comap expansion vessel control kit - to filling loops, and even treatments for maintaining central heating systems - both Comap's own label and industry leading branded products?

Our 22mm bypass valve (which of-course complies with standards of Part L Building Regulations) is ideal in systems where heating loads may simultaneously be excluded from the circuit, as it ensures re-circulation relative to the number of radiator valves that close and means that every radiator in the house can be fitted with a thermostatic radiator valve - saving energy by providing a constant minimum flow.

Look out for special offers on heating products from Comap - your one-stop-central heating shop! If you'd like more information on any of these products, or would like a copy of our Product Guide, just give us a call on 01942 603 351 or contact your Area Sales Manager.
